

Capstone Project - The Battle of Neighborhoods

Introduction/Business Problem: -

Introduction where you discuss the business problem and who would be interested in this project.

A New York based startup based on event management is planning its expansion in Toronto. However, unlike New York, the neighborhood data is not readily available on the internet.

The company is required to put together an application that offers good organized events and offers various services like a hotel of residence, meeting halls, places of landscapes to visit, stores for shopping, restaurants and cafes.

So, the company's purpose is to make a list of places of landscapes in Toronto, including the nearest restaurants, cafes and shopping stores for each place.
